
INTRODUCTION TO LiDAR BASED ENHANCED FOREST INVENTORY (EFI), TERRAIN and SURFACE PRODUCTS FOR FOREST PROFESSIONALS

FROM: MARITIME COLLEGE OF FOREST TECHNOLOGY

SUBJECT: February 23rd & 24th, 2016 course offering

The Maritime College of Forest Technology's, Department of Continuing Education is pleased to offer **Introduction to LiDAR Based Enhanced Forest Inventory (EFI), Terrain and Surface Products for Forest Professionals** with Riley Côté-DeMerchant as instructor. The course dates are February 23 & 24, 2016. The course will be held in room 230 of the Maritime College of Forest Technology, Fredericton, New Brunswick. Specific course details including an instructor profile, application form, and tuition costs are included in the attached announcement.

As LiDAR accessibility continues to increase, more industries are adopting the technology and discovering its practical and cost-saving applications. Resource industries including forestry, mining, and energy, are using LiDAR to increase efficiencies and lower operational costs. These industries are continuously discovering new ways to manipulate and apply data to better their operations, such as discovering watercourses and previously undetected structures and growth patterns.

Much like the GIS, LiDAR has the potential to revolutionize the forest industry. The availability of LiDAR derived Enhanced Forest Inventories has recently become more common and available across many land bases in New Brunswick and Nova Scotia, presenting forest professionals with an unprecedented amount of relevant data. The available information ranges from basic tree height, to more complex and detailed inventory attributes such as diameter distribution of stems throughout a stand. Further, EFI provides highly detailed information on the ground, including elevation data, percent slope and, and accurate hydrographic information.

Through hands on demonstrations of software, this course will introduce students to the basics of LiDAR; what it is, how it works, and why it is an economical choice for data collection and analysis. An overview of LiDAR equipment, and discussion of predicted upcoming LiDAR advances, applications and trends will also take place. Riley will also provide insight into the cost-savings that Leading Edge Geomatics (LEG)'s LiDAR products and services provides. You will find out exactly how LiDAR technology can:

- Lower operational costs
- Identify high value wood products
- Analyze variation in forest growth and performance
- Increase safety
- Reduce negative environmental impacts
- Improve change detection
- Account for within stand variability across the landbase

If you have any questions or wish to reserve a seat on this or any other course, please call 506-458-0649.

Department of Continuing Education*

INTRODUCTION TO LiDAR BASED ENHANCED FOREST INVENTORY (EFI), TERRAIN and SURFACE PRODUCTS FOR FOREST PROFESSIONALS

DATES: February 23 & 24, 2016

LOCATION: Room 230, Blenis Hall, Maritime College of Forest Technology, Fredericton NB.

OBJECTIVES: This program is designed to help participants:

- Provide an overview of what LiDAR is and how it works
- Briefly describe and discuss LiDAR Sensors, Acquisition, Accuracy Assessment, Quality Control and Processing
- Overview of LiDAR Applications other than forestry
- Detailed Review of LiDAR Applications for Forestry from a Maritime Context
- Details of EFI and LiDAR surface and terrain products
- Benefits of EFI and LiDAR surface and terrain products
- How to integrate EFI and LiDAR surface and terrain products into your business
- Hands on analysis of EFI and LiDAR surface and terrain products
- Discuss predicted trends and application advancements

CANDIDATES: This program is designed for people working in the resource industry, such as forestry, mining, and energy, with a specific focus for those who participate in:

- harvest and silvicultural planning
- road and trail planning
- process improvement analysis
- wetland or watercourse mapping

Working knowledge of ArcGIS is a requirement for this course

FORMAT: **Introduction to LiDAR Products** training will be conducted in an informal manner. The workshop will follow the order presented above in the objectives of the course. The majority of the course is centered on classroom instruction with individual and group exercises. Half of the final day will be centered around hands on analysis of a sample data set.

FACILITATOR: Riley Côté-DeMerchant is currently LEG's Lead Forest Product Developer, and has been with the company since 2010. A graduate of MCFT, Riley has several years' experience in Forestry, with a focus on Forest Management, GIS, remote sensing, and forest inventorying using LiDAR. During his five years at LEG, Riley has been working to develop remote sensing solutions for the forest industry, and has also aided in the development of solutions for vegetation mapping as it pertains to both the powerline and airport industries. Riley is well-versed in many aspects of the Forest Industry, having attended countless workshops and conferences, and presented at the Enhanced Forest Inventory Workshop at the Canadian Woodlands Forum Spring Meeting in Moncton, and the LiDAR in Forest Management Seminar at the Northern Hardwoods Research Institute.

ENROLMENT: Enrolment will be limited to twenty five (25) candidates on a first come-first served basis.

ACCOMMODATIONS: Commercial rooms and/or board are available at nearby commercial establishments.

MEALS: Meals are available at the cafeteria on a pay-as-you-go basis or meal tickets can be purchased at registration.

TUITION: Tuition for the program, including supplies, is \$459.00 + HST.

**Introduction to LiDAR Based Enhanced Forest Inventory (EFI), Terrain and Surface Products for Forest Professionals is equivalent to
*14 Continuing Forestry Education Credits***
